

During this meeting, we discussed what our group goals for the next week and moving forward would be. To start we discussed a need to finalize who is doing what and how we should have the basic implementation and some code in by next week. This included going over whether to use Trello or github going forward. We decided to use both. Finally, below are everyone's jobs.

Tyler Campbell:

- Setup pages to be edited upon later use. And add the docker.yaml, json, and other necessary pages.
- Implement basic hbs like footer, header, title, and main.

Tyler Campbell And Max Sherman:

- Setup the database including insert statements for tables.
- Setup an image for the readme on how the database works.
- Complete the login, register, and logout pages including UI's and API's.

Winter and Emerson:

- Work on the home page.
- Finish the navigation bar and some partials.

Nguyen:

- Your stats/ profile page is in the dropdown menu.

Ananya:

- Will work on the reviews page.
